### **Expanded Ampere Range for Series 24, One & Two Pole Rocker Switch Circuit Breaker**

*Now available in ratings of 4 – 30 amps.*

JACKSON, MI – March 25, 2009 - Mechanical Products Company (MP) today announced its Series 24 agency qualified Rocker Switch Circuit Breakers are now available through 30 amperes.

With ratings from 4 through 30 amps, the Series 24 is offered as either a one or two pole circuit protector. Availability through 30 amps now affords customers greater application opportunities than similar competitive devices (typically limited to a maximum rating of only 20 amperes).

Tested for up to 50,000 switching cycles of operation, the robust design of the Series 24 is currently qualified to UL, CSA, and CCC standards, as well as to rugged environmental standards for shock, vibration, corrosion and humidity. At this writing, qualification to IEC 60934 is pending.

The snap-in mount Series 24 may be used for power on-off switching and offers trip-free circuit protection.

Offered in several varieties of colors and markings, actuators may be protected with an optional switching prevention guard as well as a splash protection guard. Termination options include .110/.250" quick-connect terminals and screw types.

Designed to fit traditionally sized panel cutouts, the Series 24 is an economical fit, form and function alternative to previously available one and two pole thermal protectors for circuits rated up to 250VAC/50VDC.

#### **About Mechanical Products**

MP has been a leading supplier of thermal circuit protection since 1943. MP circuit breakers are used in thousands of critical & commercial applications ranging from medical equipment, lighting, communications, appliances, battery operated devices, recreational vehicles and electrical protection equipment. Headquartered in Jackson, MI, MP has been management owned since 1998 and maintains manufacturing capabilities in the US and overseas.
