Introduction of Series 27, Fuse/Fuse Holder Replacement Circuit Breaker

Switchable and Push-to-Reset Protection available in ratings of 1 to 20 amps.

JACKSON, MI – October 7, 2005 - Mechanical Products Company (MP) today announced the release for sale of its newest family of supplementary protectors, the Series 27.

Available in ratings of from 1 to 20 amps, the Series 27 has been designed to be economical, yet differentiated from the competition in robustness, aesthetics, features and electrical performance.

Whether the design calls for the sleek euro-style Push-to-Reset, or the firm tactical actuation of the Switchable, the Series 27 offers a wider ampere range of agency approved devices at 250VAC/50VDC than any other device of its type previously available. Qualified to UL, CSA, IEC and CCC standards, the Series 27 is the only Fuse/Fuse Holder Replacement Circuit Breaker that is agency approved for resistive and motor load applications up to maximums of 250VAC and 50VDC.

Designed to fit standard 3AG fuse holder panel cutouts, with a “behind the panel” depth of less than 1.76”, the Series 27 requires less space than available competitive products. And, as a replacement for a slow blow glass fuse and holder, the Series 27 is the ideal choice for circuit protection requirements for numerous and diverse applications such as transformers, marine, instrumentation, fitness equipment, power strips, household appliances, power supplies and gaming equipment, to name a few.

About Mechanical Products

MP has been a leading supplier of thermal circuit protection since 1943. MP circuit breakers are used in thousands of critical & commercial applications ranging from medical equipment, lighting, communications, appliances, battery operated devices, recreational vehicles and electrical protection equipment. MP has been management owned since 1998, headquartered in Jackson, MI and maintains manufacturing capabilities in the US and overseas.
